Work Experience

Lead Developer and Designer

XpertDox LLC

Birmingham, AL

June 2019 to Present

- Refactor application suite to use React 16+.
- Architect and develop new apps and features.
- Design new applications and redesign old applications to improve UI/UX across the suite.
- Manage India based team education on react updates and coding standards, and development progress on applications. Perform code reviews for India team.
- Revamped entire development process from a “Develop First” process to a “Design First” process.
- Architect, design, and develop SSO app to centralize user login across applications.
- Build a reusable component library to speed up the development process and phase out unreliable/unsecure third party components. Write Readme files for components so the team could easily understand how to use them.
- Replaced overly complex and resource heavy redux providers with React Context providers which decreased load times and reduced developer confusion.

Web Designer/Full stack JavaScript Developer

STANDARD FURNITURE

Bay Minette, AL

September 2018 to June 2019

Website:

- Help diagnose core problems around the current Ecomm platform and ensure they do not persist into the new platform.
- Assist contracted teams in design and development of the new Ecomm website platform.

- Advise leadership on technical decisions in the design and development process as well as accessibility and SEO concerns.
- Expand the finished platform into a highly iterable PWA for marketing and Ecomm needs.

Internal Applications:

- Use ReactJS, MongoDB, NodeJS, and Express to create Web applications to automate and speed up workflows throughout the company.
- Maintain Linux server on the intranet that hosts the suite of applications.
- Developed KitBuilder: to quickly aggregate multiple products into a single kit and upload it to our cloud server.
- Developed ImageBot: upload multiple images instantly and the bot will analyze the image names and compare them with matched products and sort them into the correct image attributes. The bot will also clean other image data during the scan process to slowly perfect our data structure.
- Developed wordBot: breaks product data down from the api and generate keywords, content, and a wysiwig editor for custom content creation on the fly.
- Developed QA submission: a web app that runs on a tablet and auto generates information and performs automatic calculations to drastically increase the speed of the product quality assurance process.
